

TEC-1F Errata 2021-09-30

PCB Version: TEC-1F-3

The IC above the 74C923 should be a 74HC373(as shown) and not a 74HC374 as labelled.

The switch and jumper are unnecessary unless you plan on using 2716 or 2732 EPROMs. you must link the jumper centre pin and A11 pin for correct operation with 8k devices.
